

## UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE  
United States Patent and Trademark Office  
Address: COMMISSIONER FOR PATENTS  
P.O. Box 1450  
Alexandria, Virginia 22313-1450  
[www.uspto.gov](http://www.uspto.gov)

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/576,721	01/26/2007	Yoshikatsu Seino	290087US0PCT	4373
22850	7590	05/15/2009	EXAMINER	
OBLON, SPIVAK, MCCLELLAND MAIER & NEUSTADT, P.C.			MICALL, JOSEPH	
1940 DUKE STREET			ART UNIT	PAPER NUMBER
ALEXANDRIA, VA 22314			1793	
NOTIFICATION DATE		DELIVERY MODE		
05/15/2009		ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com  
oblonpat@oblon.com  
jgardner@oblon.com

<b>Office Action Summary</b>	<b>Application No.</b> 10/576,721	<b>Applicant(s)</b> SEINO ET AL.
	<b>Examiner</b> Joseph V. Micali	<b>Art Unit</b> 1793

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED. (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 21 April 2006.
- 2a) This action is FINAL.      2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-8 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)  
 Paper No(s)/Mail Date 4/21/06, 6/24/06, 9/10/06.
- 4) Interview Summary (PTO-413)  
 Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) Notice of Informal Patent Application
- 6) Other: \_\_\_\_\_

## **DETAILED ACTION**

### *Status of Application*

Claims 1-8 are pending and presented for examination on the merit.

### *Election/Restrictions*

1. A telephone call was made to Paul J. Killos on May 6<sup>th</sup>, 2009 to request an oral election to the above restriction requirement, but did not result in an election being made. However, the proposed restriction is withdrawn.

### *Priority*

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. **Claims 1-4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent 07-330312 by Koyama et al (See given Patent Abstract and translation provided by examiner).**

With respect to claims 1-3, Koyama teaches obtaining a highly pure lithium sulfide by reacting lithium hydroxide with hydrogen sulfide in an aprotic organic solvent to produce the lithium hydrosulfide, and subsequently subjecting the reaction solution to a hydrogen sulfide-removing reaction, with an especially preferable solvent is N-methyl-2-pyrrolidone (NMP) and a preferable temperature range of 0-150° C (**Abstract, and claims 1-2**). With regards to the temperature range, **MPEP 2144.05 [R-5]** states, “In the case where the claimed ranges “overlap or lie inside ranges disclosed by the prior art” a *prima facie* case of obviousness exists.

With respect to claim 4, Koyama teaches in one of the examples, a lithium sulfide purity of no less than 99.8% (**paragraph 0037**), and thus, less than or equal to 0.2% impurity. The current claim limitation is a total impurity weight percent equal or less than to 0.25%.

**7. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent 07-330312 by Koyama et al, as applied to claims 1-4 above, and further in view of US Patent No. 6,022,640 by Takada et al.**

With respect to claim 5, Koyama is silent with regards to a purpose for the lithium sulfide and its use in a solid electrolyte for a lithium rechargeable battery.

Takada is drawn to a solid state rechargeable lithium battery. Specifically, Takada teaches using a lithium ion conductive solid electrolyte of inorganic compounds, one composed of sulfides, and of these electrolytes, those synthesized from mainly lithium sulfide are preferred (**column 8, lines 42-58**).

At the time of invention it would have been obvious to a person of ordinary skill in the art to produce the product of Koyama in a solid electrolyte form, in view of the teaching of Takada. The suggestion or motivation for doing so would have been to create an electrolyte well-suited from large scale production, with attributes such as high ion conductivity and improved high rate capability of the battery (**Takada, column 8, lines 42-58**).

With respect to claim 7, Takada teaches the use of the solid electrolyte for a lithium rechargeable battery in a solid battery (**title, abstract, and column 8, lines 42-58**).

**8. Claims 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent 07-330312 by Koyama et al and US Patent No. 6,022,640 by Takada et al, as applied to claims 1-5 and 7 above, and further in view of US Patent Pub No. 2004/0109940 by Kugai et al.**

With respect to claim 6, though Takada discloses an improved ionic conductance in the solid electrolyte produce, the reference is silent as to a value of the ionic conductance.

Kugai is drawn to a method of producing a negative electrode for lithium secondary cells. Specifically, Kugai teaches an inorganic solid electrolyte in the form of a thin film having an ionic conductance of at least  $1 \times 10^{-4}$  S/cm, with a preferred range of  $5 \times 10^{-4}$  S/cm to  $2.5 \times 10^{-3}$  S/cm (**paragraph 0024**).

At the time of invention it would have been obvious to a person of ordinary skill in the art to produce the product of Koyama and Takada with the claimed ionic conductance, in view of the teaching of Kugai. The suggestion or motivation for doing so would have been to have an improved ionic conductance within the solid electrolyte for improved high rate capability of the battery (**Takada, column 8, lines 42-58**). **MPEP 2144.05 [R-5]** states, “In the case where the claimed ranges “overlap or lie inside ranges disclosed by the prior art” a *prima facie* case of obviousness exists.

With respect to claim 8, Takada teaches the use of the solid electrolyte for a lithium rechargeable battery in a solid battery (**title, abstract, and column 8, lines 42-58**).

#### ***Conclusion***

9. Claims 1-8 are rejected.
10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph V. Micali whose telephone number is (571) 270-5906. The examiner can normally be reached on Monday through Friday, 7:30am to 5pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Jerry A. Lorengo can be reached on (571) 272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
